## OFF-ROAD

**R-9750 Headliner***Air Conditioner with Heat Option***CONSTRUCTION • MINING • AGRICULTURE**

The R-9750 is the ideal headliner A/C unit for off-highway equipment cabs. It quickly produces 240 CFM of airflow, filters recirculating cab air, and its heater option delivers year-round comfort. Four multidirectional louvers deliver the air where you need it. Options include an outside air adapter, remote-mount filter, and in-line booster blower for a pressurized, dust-free cab.

**R-9750 SPECIFICATIONS**

<b>BTU'S</b>	Cooling – 17,000 BTU/Hr with 36°F (5 kW with 2.2°C) refrigerant temp. and 80°F (26.7°C) wet bulb entering air Heating – 25,600 BTU/Hr @ 100°F (7.5 kW @ 37.8°C) air temp. rise
<b>AIR FLOW</b>	240 CFM (408 m3/h)
<b>WEIGHT</b>	44 lbs. (20 kg)
<b>CURRENT DRAW</b>	13 amps @ 13.6 VDC (includes 4 amps for A/C clutch) 6.5 amps @ 27.2 VDC (includes 2 amps for A/C clutch)

**OPTIONS:**

6. Vertical Air Filter 78R5110

\* Used with 78R5100 or 78R5110 Air Filters.

# Compact Headliner Air Conditioner Model R-9750

## INSTALLATION INSTRUCTIONS

### NOTE:

1. Please read instructions all the way through, making sure you have all the parts and tools.
2. While working on or around a Vehicle disconnect the battery to prevent accidental start-up or electrical shorts.
3. It has been established the R-12 refrigerant does deplete the earth's protective ozone layer.  
Use care so as not to release this material Into the atmosphere.
4. A/C systems operate under high pressure. At 77°F the refrigerant container will be pressurized to approximately 80 psi. Use caution when working with these materials.  
Goggles are recommended.
5. To function properly the A/C system must be clean and dry. Keep caps or protective covers on all hoses and fittings until final assembly.
6. **IMPORTANT:** Attach appropriate SAE warning label on vehicle.

### NOTE:

1. Additional items required for complete installation:

- |                                 |  |
|---------------------------------|--|
| A) Compressor                   | 8 to 10 cubic inch displacement are required (Sanden SD-5[]8, SD-510 or equivalent). For HFC-134a use a compressor compatible with R-134a  |
| B) Condenser                    | Remote Mount (R-9720 or equivalent); or Radiator Mount (77R 06,50 or equivalent). For R-134a use R-9725 or 77R 0650  |
| C) Compressor Mount Kit         | This includes mounting hardware, belts and pulleys (if needed).  |
| D) Receiver Drier               | High capacity (12 cubic inches of desiccant) 74R 1706 or equivalent. For R-134a applications use 74R 1806 or equivalent.   |
| E) System Protection Switch(es) | 71R 7000 binary switch, high and low pressure cut-out or equivalent dual switches. For R-134a applications use 71R 7050.   |
| F) Refrigerant Hose             | Nylon Barrier or nylon lined refrigerant hose is recommended minimum quality for heavy duty applications. Push-on fittings can be used on either hose although a "crimp fitting" is recommended. Reusable fittings can be used only with the Aeroquip nylon hose (R-12 applications only). Galaxy hose with crimp fittings are recommended for R-134a. |

### A. Mounting the Unit

1. Remove the headliner or loosen enough to drop the center portion (Disregard if no headliner).
2. Determine the most suitable location for mounting the air conditioning unit.
  - a. Mark the front-to-rear centerline of the cab on the outside of the cab roof (if centering unit in the cab).
  - b. Unbolt unit lid from main housing and place on the roof using the centerline as a guide.

**NOTE:** For proper water drainage, be sure the rear of the unit is not mounted higher than the front.

3. Mark the mounting hole locations.
4. Drill the mounting holes and remove burrs and sharp edges. Clean 2" around mounting holes with solvent for application of adhesive sealant to waterproof holes. See Figure 1.

**Red Dot Corporation** P.O. Box 88790, Seattle, WA 98138 (425) 251-6897 Fax (425) 251-3934

5. Re-assemble unit lid to main housing unit.
6. Temporarily install the headliner unit inside the cab and determine if roof reinforcing is needed, If so, make and install reinforcing at this time.
7. Mount unit to roof of cab using mounting bolts, nuts and washers. See Figure 1.  
**NOTE:** Apply adhesive sealant to the mounting hole locations before mounting unit. Tighten mounting bolts evenly and caulk with sealant.

**TYPICAL UNIT PLACEMENT**

**Figure 1**

**B. Compressor Mounting**

1. Install compressor mounting hardware to engine block.

**NOTE:** Red Dot does not recommend any compressor mount designs that are not directly attached to the engine. If fabrication of compressor mounting bracket is required, be sure to design so the belt wrap is a minimum of 1/3 around the clutch pulley and can be tensioned easily. If designing for a Sanden Compressor, Red Dot does provide an adjustable adapter bracket 75R 6010 which often saves time in design and fabrication. See Figure 2.

**SANDEN COMPRESSOR AND BRACKET**

**Figure 2**

2. Install compressor making sure to properly align and tension drive belt.
3. Check compressor refrigerant oil level per compressor manufacturer's instructions.

**C. Condenser Mounting (Remote or Radiator Style)**

**Remote Mount**

1. Locate in an area as far from flying debris as possible so the condenser can be easily serviced when motors need changing or cleaning debris from fins.
2. Mount in a position so that the large (#8) hose fitting is above the small (#6) hose fitting.

**Radiator Mount**

1. A radiator mounted condenser will be effective only if positioned to receive maximum air flow. (Usually flow is greatest toward the outside versus the center of the radiator).
2. Install condenser allowing a minimum of 1.5 inch air space between the condenser and the radiator. Also, all radiators should have baffles on top and sides to prevent hot air recirculating back around the radiator.

**D. Refrigerant Hose Installation**

1. Determine desired hose routing and measure hose lengths, per plumbing schematic. See Figure 3.  
NOTE: If suction line #10 hose length is longer than 10 feet, Red Dot recommends using #12 refrigerant hose and "step-up" refrigerant fittings. This will improve system function.
2. Cut refrigerant hose to length using a knife. DO NOT SAW OFF. See Figure 4, Step 1.
3. Install fittings on hose. See Figure 4, Steps 2 and 3. (Be sure to clean out refrigerant hose after cuffing).
4. Add refrigerant oil to A/C components as follows:

2 oz. - Condenser

1 oz. - Receiver Drier

1 oz. - Evaporator

If using R-134a refrigerant, be sure to use oil recommended by the compressor manufacturer.

**R-9750 PLUMBING SCHEMATIC**  
Figure 3

1. Cut hose to proper length.
2. Screw hose into collar (left hand thread) until hose bottoms. Back out 1/4 turn.
3. Screw fittings into collar until insert bottoms. (Lubricate insert and I.D. of hose for ease of assembly).

**REUSABLE FITTING INSTALLATION  
(R-12 Systems Only)  
Figure 4**

5. Lubricate "O" rings with mineral oil and attach to fittings. Route and connect #6, #8 and #10 hoses to unit, compressor, condenser, and receiver drier per plumbing schematic. See Figure 3. (Use appropriate oil for R-12 or R-134a).
6. Use clamps to secure hoses and prevent hose movement. Hoses must not come in contact with hot vehicle components, exhaust manifold, etc., and they should not be subject to mechanical abrasions.  
NOTE: Insulating the suction line is often required for proper system performance.

**E. Drain Hose Installation**

NOTE: See Figure 5 for additional information on drain hose installation.

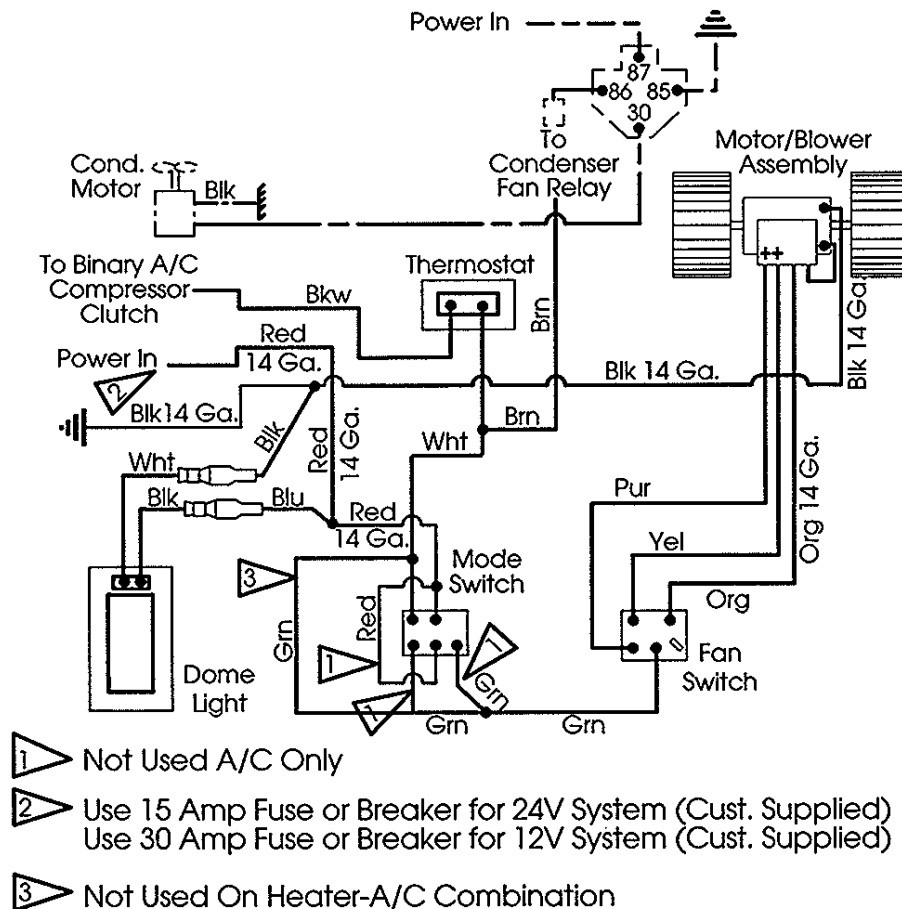

**DRAIN HOSE INSTALLATION  
Figure 5**

1. Attach drain hose assembly to the unit.
2. Route drain hoses out the cab at desired location. Be certain the drain hoses run downhill from the unit at a minimum slope angle of 20°. Also be certain the last two feet point straight down.  
**NOTE:** The drain hose is stepped down in size at two places to promote siphoning water from the drain pan under evaporator. The reduction in diameter forces the water to flow in a solid column. This creates a suction that draws the rest of the water out of the pan. For this effect to work properly, the last two feet of 5/16 O.D. drain tube should point straight down or as close to this as possible.
3. If drain hose assembly is too long remove 7/16 drain hose at reducer; cut to desired length and re-install.
4. Secure drain hoses with tie wraps. Inspect to make sure hoses are not kinked or pinched off.

#### F. Unit Wiring

**NOTE:** See Figure 6 for wiring diagram provided for additional information.

1. Disconnect bakery.
2. Black w/White - Route to low pressure protection switch stripe wire.
3. Red Wire - Connect to an ignition switch supply through a 30 amp circuit breaker for 12 volt system; a 15 amp circuit breaker for 24 volt system.
4. Black Wire - Unit grounding wire.
5. Brown Wire - Route to condenser motor via relay.

Note: All Wires Are 16 Ga Unless Otherwise Specified  
WARNING: Unit warranty void if fused power source not used.

**WIRING DIAGRAM**  
**Figure 6**

## **G. Final Assembly and Check**

### **WARNING**

The owner operator of the R-9750 unit accepts the responsibility for the proper and safe installation and maintenance of the unit. Special attention must be given to the mounting assembly and fasteners as well as the hose assembly and connections to be sure that they are securely fastened and in good condition to preclude the possibility of personal injury.

1. Evacuate the system, then charge with refrigerant and test for leaks.
2. Connect the battery.
3. Turn the ignition switch to the "on" position and place the fan speed switch on the highest position.
4. Place the Heat-A/C switch to the "A/C" position and the temperature control lever on the coldest position.
  - a. The clutch should click on and be engaged.
  - b. The evaporator blower should be turning at high speed.
5. Turn the fan switch to the "off" position and compressor clutch should disengage.
6. Move the Heat-NC switch to the "Heat" position and compressor should disengage.
7. Start engine and run at 1500-2000 rpm. Place the Heat-A/C switch to the "A/C" position and the A/C fan switch to the high speed position. Check sight glass for bubbles. Add 6 to 8 ounces more refrigerant after the sight glass just clears.
8. Make sure clutch cycles off and on as system is operating.

OFF-ROAD

R-9753 Headliner

Heater/Air Conditioner Unit

OFF-ROAD • CONSTRUCTION • INDUSTRIAL

The R-9753 compact headliner air conditioner was designed for hard to air condition cabs. Its compact, low profile, heavy duty construction makes this unit the best in its class for OFF-ROAD applications. With its capacity to filter recirculated air and adaptability to use an outside air adapter, dusty environments are not a problem.

R-9753 SPECIFICATIONS

BTU'S	Cooling - 17,000 BTU/Hr
	Heating - 20,000 BTU/Hr
AIR FLOW	230 CFM (391 m³/h)
WEIGHT	24 lbs. (11kg)
CURRENT	18 amps at 13.5 VDC
DRAW	9 amps at 27 VDC

## TECHNICAL SALES BULLETIN AND SERVICE PARTS LIST

### DIMENSIONS

### SPECIFICATIONS

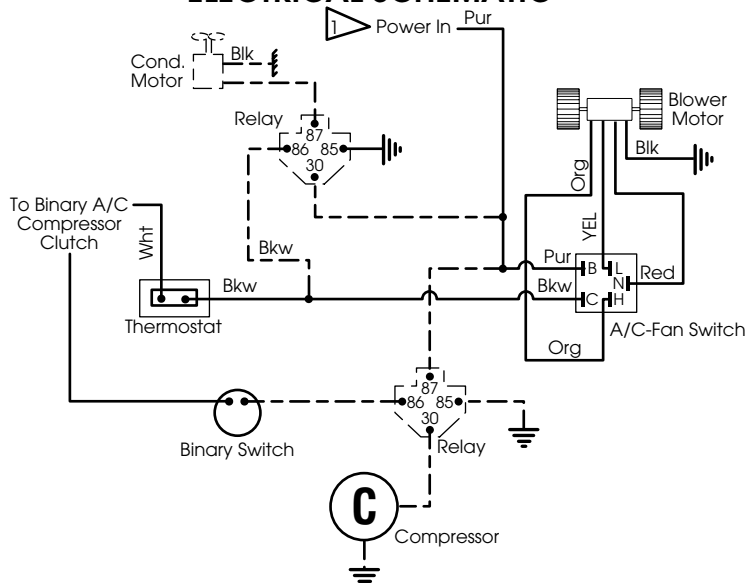

**BTU's Per Hour:** Cooling- 17,000 Btu/Hr (4.98 K.W./Hr.) @ 80°F. (26.7°C) Wet Bulb and 36°F. (2.20°C) Refrigerant Temp.

**Air Flow:** 250 C.F.M.

**Current Draw:** 14 Amps @ 13.6 Volts (Includes 4 Amps for A/C Clutch)  
7 Amps @ 27.2 Volts (Includes 2 Amps for A/C Clutch)

### SCHEMATICS

#### ELECTRICAL SCHEMATIC

#### PLUMBING SCHEMATIC

Use 15 Amp Fuse or Breaker for 24V System (Cust. Supplied)  
Use 30 Amp Fuse or Breaker for 12V System (Cust. Supplied)

Note: All Wires Are 16 Ga Unless Otherwise Specified  
WARNING: Unit warranty void if fused power source not used.

## OFF-ROAD

**R-9759 Headliner***Heater/Air Conditioner Unit***OFF-ROAD • CONSTRUCTION • INDUSTRIAL**

Delivering 400 CFM through five outlets, the R-9759 provides exceptional comfort in demanding conditions. Available as a heater-A/C combination or A/C-only. Optional filtration is available for the cab as well as incoming outside air when pressurization is required.
